SPC FLOORING

Introduction to SPC Flooring

SPC Flooring (Rigid Core LVP) is the latest upgrade and improvement of traditional Luxury Vinyl Tiles (LVT), which is so popular in USA nowadays.

SPC Flooring is the newest generation of rigid core luxury vinyl flooring, not only having a floating system, but is easily installed with the click and lock joint. The flooring can be installed on many different types of bases. This flooring allows you to install directly on concrete or any existing flooring.

The main content of the flooring is natural stone powder, polyvinyl chloride and stabilizer which combined provides a very stable composable material. The SPC Flooring design surpasses competitors. An important attribute is that the flooring does not contain any formaldehyde, making it a safe and durable flooring system.

The flooring is made up of 6 layers which include the solid vinyl core with a click, décor printing film with boats with an excellent design, wear layer with super strong vinyl and of course the UV protective layer.

KEY ADVANTAGES:

- Absolutely 100% water-proof allowing this flooring to be installed in kitchens, bathrooms, laundry rooms and basements.
- The flooring boasts in being fire-retardant allowing flames on SPC Flooring to automatically extinguish in a few seconds, and also does not produce toxic or harmful gases.
- SPC Flooring contains NO Formaldehyde.
- SPC Flooring does not promote mildew and bacterial growth, making it Anti-Mildew and Anti-Bacterial flooring product, being Safe and Sustainable.
- No curling, even in environments with higher / lower temperature environments, or in areas with heavy traffic.
- The High-density rigid core material together with the strengthened click system is much stronger than regular LVT systems.
- Extremely stable, expansions and shrinking allows for approximately 0.06%.
- Superior indentation resistance.
- Glue free, easy to installation with click and locking system.
